

AP Computer Science Principles

Summer Work 2023

A prerequisite for the course is to read the first two chapters of the *Blown to Bits* which is available for download for free under a Creative Commons license using the following link:

<https://www.bitsbook.com/excerpts/>

Additionally, please attempt lessons 4 through 8 of Unit 3 of [Code.org](https://code.org)'s Computer Science Principles online course.

Use the link/section code below to join the [Code.org](https://code.org) section. Use your Salisbury School email account to register if you have one. If not, please make sure that you use your actual name as the user name/identifier.

Navigate to <https://code.org/join> and type in the section code: **SYSTCM**.

The code.org assignment serves two purposes. First, it will familiarize you with the Integrated Development Environment (IDE) that we will use throughout the year. Second, it will give you a sense of some of the concepts you will encounter in the upcoming year and hopefully confirm your enthusiasm for taking the course.

Please email Mr. May at jmay@salisburyschool.org if you have any difficulty enrolling in the course or have any questions about completion of the summer work.

Please expect a quiz on the summer material in the first week of school.
